

Edge AI Readiness Checklist

Use this checklist to evaluate your organization's preparedness for deploying Edge AI solutions.

- Do you have clearly defined latency-sensitive workloads?
- Is your hardware infrastructure capable of running on-device inference?
- Have you selected models that fit within edge resource constraints?
- Do you have a secure model distribution and update pipeline?
- Is your team prepared to manage hybrid (edge + cloud) architectures?
- Are privacy and compliance requirements mapped for on-device processing?
- Do you have monitoring tools for model performance and drift at the edge?
- Is bandwidth usage optimized by preprocessing data locally?
